Section 1 – Target Market

An investor who satisfies the following is in the target market for the Trust:

- wants long-term capital growth and is seeking to gear a portfolio of growth assets (primarily shares);
- wants to gear their investment but doesn't want the burden of obtaining and managing their own loan;
- wants an investment that's diversified across global and Australian shares, investment managers, and securities;
- wants the Trust's manager to actively adjust the portfolio to take advantage of opportunities to provide better returns than those generated by the investment markets the portfolio invests in;
- expects growth in the assets' value to exceed the costs of gearing;
- is comfortable with the risks of gearing including extra volatility and increased risk of capital loss;
- is an Australian or New Zealand resident; and
- wants to invest either:
 - indirectly, through a 'platform product' (such as an investor-directed portfolio service or a 'wrap'-style superannuation product), or
 - directly, by application to us (provided the amount they want to invest is at least \$500,000).

Customer need/objective/financial situation	Details
Investment objective	
Capital growth	The Trust is designed for investors seeking long-term capital growth by investing in a Trust that aims to outperform a benchmark which is almost entirely growth assets and may have a gearing level of up to 30%. The Trust aims to outperform its benchmark, before fees, over a 5 year period.
Product use as a percentage of an investor's portfolio	
Standalone (75-100%) Core Component (25-75%) Satellite (<25%)	The Trust is designed for use as a standalone investment solution or as a core or satellite component of an investor's broader portfolio of investments.
Investment timeframe	
Long term	The Trust is designed for investors who are looking to make a long-term investment with at least an 8 year timeframe.

Risk and Return	
Very high risk & return	<p>The Trust is designed for investors seeking the potential for higher returns and are willing to accept very high risk (estimated as 6 negative annual returns in any 20 year period).</p> <p>The risk is high because the Trust gears a diversified portfolio comprising almost entirely of growth assets. Gearing magnifies exposure to potential gains and losses of an investment. As a result, larger fluctuations in value, compared to the same investment which is not geared, can be expected.</p>
Redemption frequency	
Daily	In normal circumstances, the Trust processes withdrawals each business day. For further information refer to the PDS.

Distribution Channels	Distribution Conditions
